DOMAIN: Has a highly basic region with many copies of the sequence KKEE and KKEI/V, repeated but not at fixed intervals, which is responsible for the binding of MAPIB to microtubules.

PTM: LC1 is coexpressed with MAPIB. It is a polypeptide generated from MAPIB by proteolyric processing. It is free to associate with both MAPIA and MAPIB. It interacts with the amino-terminal region

SIMILARITY: TO MAPIA.
CAUTION: A C-terminal fragment of this protein (residues 1597
CAUTION: A C-terminally described as neuraxin in ref.3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     D.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      nerve levels are high early in development but decrease during postnatal development and are low in adults. In dorsal root ganglia levels remain high throughout development.

INDUCTION: By nerve growth factor.

DOMAIN: Has a highly basic region with many copies of the sequence KKEE and KKEI/V, repeated but not at fixed intervals, which is responsible for the binding of MAPIB to microtubules.

PTM: LC1 is coexpressed with MAPIB. It is a polypeptide generated from MAPIB by proteolytic processing. It is free to associate with both MAPIA and MAPIB. It interacts with the amino-terminal region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                SUBUNIT: 3 different light chains, LC1, LC2 and LC3, with MAP1A and MAP1B proteins.
TISSUE SPECIFICITY: Nervous system (spinal cord, braicerebellum and cerebrum). Not expressed in liver, spl
                                                                                                                                                                                                                                                                                                                         European Bioinformatics Institute.

Characterization of the kinetochore binding domain of CENP-E reveals interactions with the kinetochore proteins CENP-F and hBUBRI.";

J. Cell Biol. 143:49-63(1998).

J. Cell Biol. 143:49-63(1998).

FUNCTION: MINIS-END DIRECTED MICROTUBULE MOTOR. PROBABLE KINETOCHORE MOTOR. ACCUMULATES JUST BEFORE MITOSIS AT THE G2 PHASE OF THE CELL CYCLE. PROBABLY IMPORTANT FOR CHROMOSOME MOVEMENT AND/OR SPINDLE ELONGATION.

1. SUBCURIT: INTERACTS WITH CENP-F AND BUBRI KINASE.

1. SUBCURIT: INTERACTS WITH CENP-F AND BUBRI KINASE.

1. SUBCURIT: ASSOCIATES WITH KINETOCHORES DURING CONGRESSION, RELOCATES TO THE SPINDLE MIDZONE AT ANAPHASE, AND IS QUANTITATIVELY DISCARDED AT THE END OF THE CELL DIVISION.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         DOMAIN
